LIBIT's

Committed to Quality

Our approach focuses on friendly way of business, thereby combining IT innovations and adoption while leveraging an organization's current assets. Our team is committed to provide IT Services with:

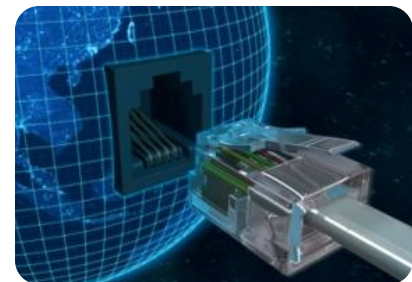

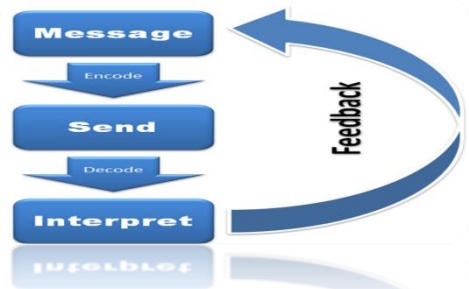

Quality:

We are committed to quality and constantly work on improving it. We use the best industry standards in project management, development and testing.

Effective Communication: Our project managers fully understand the importance of seamless communication for the success of the project. They are very response and are willing to discuss project details with you to match your expectations 100%

Focused: Unlike many software development companies we do not disperse our effort across all services. Our specialists are truly professionals. We believe at "one task @ one time

Technology: Technology leadership is the most successful strategy to challenge competitors and consolidate our position since business and technology work hand in hand. Our firm's belief in this synthesis has motivated and enabled us to deliver solutions with a decisive competitive advantage

Innovation: In our each project, we emphasize on innovation. Our structured team works with a methodology and knowledge to innovate and deliver excellent services.

Support: We are committed to provide development and tech-support teams to software and high-tech companies with the required infrastructure at a competitive rate. On the support side, we provide Team leads, Senior, and Junior Technical support personnel on a 24 x 7 basis.

ABOUT US

Libit Solutions is a website and software developing company implementing IT projects of any complexities. We Deliver quality Solutions in cost Effective manner.

Libit Solutions is the leading information technology consulting, services, and business process outsourcing organization that envisioned and instigated the adoption of the flexible business practices that today enable our client companies to operate more efficiently and produce more value.

Libit Software Solution's strength lies in perceiving the client's business processes, culture, vision and goals across the industry segments and offering client oriented solutions, which are highly reliable. We commenced operations since 2008, to provide consulting and IT services to clients - globally as partners to conceptualize and realize technology driven business transformation initiatives.

With a rare mix of domain, technology & project management experts, we bring the most complete team to bear on every project we take on. Business & technology experts, from some of the best universities in the country, bring invaluable insights and expertise into their areas of expertise. Industry veterans, who laid the foundation of the offshore services business, form the backbone of our leadership team. In a business model where people are the growth drivers, we are endowed with one of the most enviable pool of talent from across the country.

While our strong sales & marketing presence across the globe gives us the ability to strengthen existing relationships, build new ones & enter new markets. On the other hand, our alliance partners give us an extended reach into markets where we do not have a direct presence.

Our Mission

We aim to be the best at what we do. LIBIT has a dream of evolving into a Global IT Company, ensuring that the solutions being delivered include best practice in I. T. with the chosen area of technology.

- We operate with complete focus to Maximize customer satisfaction.
- Develop and encourage an environment of mutual respect within company and extending it beyond to clients.
- Encourage commitment and personal learning of workforce.

We are proud to have built our organization on the strong pillars of integrity, honesty, and self-respect.

Vision

To produce excellent services in the field of IT Services and Consultancy with maximum efforts driven towards customer satisfaction.

Value

To build upon a reputation of being one of the most innovative IT Solution and Service provider. We believe in doing our work in the most efficient way with robust and structured methodology, with gradual evolution from hard-work to smart-work culture, at client's end also.

Customers Focus: We deliver measurable Business Value. We bring greater flexibility, faster time to market, technical expertise and lower cost benefit to the doorstep of our customers.

Solution Orientation: We treat each problem as a first step towards finding a solution. When faced with a problem we focus on a solution to the problem.

Legal Compliance: Our services comply with applicable national and international regulations and legislations.

Decision Making: We believe Decisions are never right – we take them and then work very hard to make them right.

Web: www.libitsolutions.com

Our Company has highly qualified and experienced team of professionals with varied domain knowledge and expertise to provide cutting solutions within a strict time line. Our professional experience in

- custom software development software
- application development,
- product and tool development
- website designing and development
- database design and development
- backend web programming
- IT software consultancy
- E-Commerce
- Search Engine Optimization

The team has made it from initial phase to today's business stance, with full-fledged, completely owned set of variety of operations. With a mix of domain, technology and project management experts, we bring the complete team of every project we take on. Our people work with enthusiasm, and a drive to be the best. There innovative spirit and ambition to be the best encourage them to voice new ideas without any fear as ours is a company of minimum hierarchy and makes LIBIT a congenial place to work.

Working Process

Envisioning: Based on an initial project description provide by the client. LIBIT provides an approximate estimate of the cost and time required to do the work. Architecture: our project manager closely communicates with the client to elaborate a comprehensive and detailed project concept. Based on that concept they create a prototype and a functional specification (FS). Client also participates by providing feedback and comments that are incorporated into the prototype and FS. When the client approves the prototype, a final project estimate is made.

Development: At this stage coding starts. Project manager continues to communicate with the client to clear up all the details and reports on the project progress. Team Leader

supervises and coordinates work on graphic and design and testing for the solution. At this stage solution coding starts.

Launch: At this stage solution is deployed on client's servers and is placed into operation. Client actively participates in acceptance of the solution.

Postproduction support and development: if your solution requires further enhancement or development at any time during operation, our specialists will be able to assist you. You can choose from many support options that we offer the one that suits you better.

Our 3-Phase Support System

Technical support is a vital part of total Libit Solutions customer experience. We want you to get the most from our products and services long after the initial sale and installation. We are dedicated to ensure that every issue is resolved to your satisfaction. You will receive periodic updates on the progress until the issue is resolved.

In order to assure and provide the successful performance of our solutions inside your infrastructure, we deliver an individual approach to each customer. This service will optimize our applications under your system/IT infrastructure parameters and conditions. This process may require a deep analysis and review from our team of professionals. A longer time period may be required to discover all the opportunities, to troubleshoot software and hardware compatibility and finally, to create the best solution to meet your requirements.

Phase – 1 Support via Phone Calls and Emails: We send voice message to remind you so we provide support if there is any issues related to our software/services. Libit Solutions engineers will meet any/all your requirements providing an on-demand response to any technical issues reported. Our objective is to provide you a satisfactory solution and meet your business requirements.

Phase – 2 Work Report: You will receive periodic updates on the progress via Email and calls. We will report you time to time about Service/software.

Phase – 3 24*7 basis Support: Libit Solutions provide a suit of effective, top-quality support to meet your specific needs. You can call or mail us about your issues. We will provide support as soon as possible.

Software Development

Software development is what Libit professionally does for the last 4 years. We are experts in rapid custom development of web-based, distributed and standalone applications designed to meet your organization's specific requirements and business needs. We follow proven practices that allow for successful project completion, and deliver solutions that exceed customer expectations. We have experience with working with broad range of customers, from individuals to some of the world's largest companies.

Libit Solutions is a custom software development company in India. We deal in custom software development, Web design, Web application development, online or offline database management, E-commerce solutions, search engine optimization, site promotion, software development, maintenance of software and website our software development services are available throughout the product life cycle. They include design and development of new software products as well as re-developing the existing software applications. Our software product development team assures global implementation and rollout support for the existing products also DST use different type techniques for software development methodologies to visualize prototype, design and construct a software application. Our development team offers those software solutions that will benefit the customers with tractability, cycle time reduction and flexible software application delivery capabilities.

We always put main stress to perform the job before or within the prescribed time-limit, as directed by the client. We use the most effective, innovative and appropriate techniques and methodologies as per the market trends and requirements of the clients. With a good team of experts of software and IT field, Libit Solutions is able to provide a highly competitive, effective and cost-efficient Product at very reasonable limits.

System Development Life Cycle (SDLC) Model:

This is also known as Classic Life Cycle Model (or) Linear Sequential Model (or) Waterfall Method. This model has the following activities.

1. System/Information Engineering and Modeling

As software is always of a large system (or business), work begins by establishing the requirements for all system elements and then allocating some subset of these requirements to software. This system view is essential when the software must interface

A-31,Radha Vihar, New Sanganer Road, Sodala, Jaipur-302019,Raj

Contact : 9414442748,01416598240

Email : response2libit@libitsolutions.com

Web: www.libitsolutions.com

with other elements such as hardware, people and other resources. System is the basic and very critical requirement for the existence of software in any entity. So if the system is not in place, the system should be engineered and put in place. In some cases, to extract the maximum output, the system should be re-engineered and spruced up. Once the ideal system is engineered or tuned, the development team studies the software requirement for the system.

2. Software Requirement Analysis

This process is also known as feasibility study. In this phase, the development team visits the customer and studies their system. They investigate the need for possible software automation in the given system. By the end of the feasibility study, the team furnishes a document that holds the different specific recommendations for the candidate system. It also includes the personnel assignments, costs, project schedule, target dates etc.... The requirement gathering process is intensified and focused specially on software. To understand the nature of the program's) to be built, the system engineer or "Analyst" must understand the information domain for the software, as well as required function, behavior, performance and interfacing. The essential purpose of this phase is to find the need and to define the problem that needs to be solved.

3. System Analysis and Design

In this phase, the software development process, the software's overall structure and its nuances are defined. In terms of the client/server technology, the number of tiers needed for the package architecture, the database design, the data structure design etc... are all defined in this phase. A software development model is thus created. Analysis and Design are very crucial in the whole development cycle. Any glitch in the design phase could be very expensive to solve in the later stage of the software development. Much care is taken during this phase. The logical system of the product is developed in this phase.

4. Code Generation

The design must be translated into a machine-readable form. The code generation step performs this task. If the design is performed in a detailed manner, code generation can be accomplished without much complication. Programming tools like compilers, interpreters, debuggers etc... are used to generate the code. Different high level programming languages like C, C++, Pascal, Java are used for coding. With respect to the type of application, the right programming language is chosen.

5. Testing

Once the code is generated, the software program testing begins. Different testing methodologies are available to unravel the bugs that were committed during the previous phases. Different testing tools and methodologies are already available. Some companies build their own testing tools that are tailor made for their own development

operations.

6. Maintenance

The software will definitely undergo change once it is delivered to the customer. There can be many reasons for this change to occur. Change could happen because of some unexpected input values into the system. In addition, the changes in the system could directly affect the software operations. The software should be developed to accommodate changes that could happen during the post implementation period.

Website Designing & Development

Libit Solutions delivers professional web design services. Our web designing services can identify all your needs in terms of what type of web design fits in with the image of your company. Our experts use latest designing tools in creating original cutting-edge design, the best one using flash web design! Our specialists also develop Flash presentations, logos, banners and corporate Intro pages.

We can merge Flash and other motion graphics into your Web site design. Incorporating a Flash presentation is an excellent way to attract position and add impact to your Web site.

Your web sites your window to the world:

The best way to exploit the potential of the Internet for your business is to have a presence on it. This is achieved by having a web site for your company. Your web site, by providing a radically simpler, easy way of access to your business from anywhere in the world, acts as your window to the world.

With a web site it's business without limits:

Millions of users of the Internet can easily access your site and know about your products and services. This enables your business to reach a wider and larger customer base without the need for any additional physical infrastructure. It can register all business inquiries and pass these on to you instantaneously. You can cater to your customer and prospects all through the year, as the site is open 24 hours a day, 365 days of the year. Enables you to learn more about your customer and prospects, because of its interactivity. Better and timelier customer support by directly answering customer queries on the net. Cost effectiveness, as you can provide support and services directly from the site.

Web: www.libitsolutions.com

As companies look to technologies such as firewalls, virtual private networking (VPN), IP Telephony, Voice over IP (VoIP) and converged data/voice/video networks, Convergent Communications can help deliver "on-demand" network management services in a scalable manner with flexible pricing options as well as fully customized solutions tailored to specific needs. Convergent Communications Network Consulting provides best practices to help businesses examine where your network infrastructure is today, where it needs to be and how to get there.

We offer vision, strategy, assessment, architecture and conceptual design services to help businesses understand their current network infrastructure and emerging network technologies. We then formulate a strategy and plan for a flexible and secure high performance network - one that's right for you, today and in the future. Our Networking Services can help your organization, regardless of size, manage IT investments, reduce risk and capitalize on business opportunities. Our networking services can help customers save up to 30% on network costs via lower management, bandwidth and application integration costs.

An overview of our checklist:

- Existing IT infrastructure examination
- Audit Report
- Audit Re-commendation
- Formulate a strategy and plan for a flexible and secure high performance network
- Architecture and conceptual design
- Optimizing the design to meet both immediate and future needs and save costs

Bandwidth procurement and management is a specialized activity. With our team of experienced professionals at key metros, we offer our customers single point solutions for networking. We work closely with service providers; wireless, wired line, VSAT, ISPs etc. for our clients bandwidth requirement to offer optimized solution.

Our online marketing - Website Promotion Service will bring more traffic to your site - highly qualified, targeted traffic that Generates Leads and Increases Your Sales month after month. You will see tangible Results within desired period along with best website promotion resource.

Search Engine Optimization (SEO)

Search engine optimization (SEO Company Services) is the art of preparing, analyzing, and promoting your web site to ensure that it is extremely visible and highly ranked in the search engines for related keyword.

A design which is professional, and its functionality will make the web site great! What good is a great site, if nobody can find it on the web? We have developed various creative designs that drive traffic and sales.

SEO web site development involves lot of research and analysis. It's very important we research for the target market and the target group (TG) for any online business. We also need to understand that what does the client expects for its online presence; is there a need for online leads or sale of products or just for Brand Building. Professional SEO Web

Design starts with identifying the target market, keywords and online competition. Once we have developed a sound search engine optimization strategy, we create a look and feel that demonstrates the web position of the client.

We offer every facet of professional web site design including, graphic design, e-business consulting, web site production, product imaging, search engine optimization, (SEO) META tag structuring, splash entrance pages, active databases, web forms, storefront, auction, shopping cart and complete e-commerce web site production.

If you're going to create a web site position that promotes your brand, choose a professional web site design firm to ensure the performance, look and feel both you and your perspective customers will enjoy. In addition, invest in a web site that will attract new users through an effective organic search strategy.

through online. This education gives you enough time to set your own study time from anywhere.

The ability to communicate and interact with students all over the country or even the world provides unique advantage to the student. Documents, transcripts, live discussions and training materials are all archived and recorded so that they can be retrieved via mail, e-mail or the school's website for reading, downloading, and printing. Instructors are also available at convenient times and respond quickly through email.

Methods

Internet- basically online

Intranet – computer presentation through internal connectivity within the institute or videoconferencing

Extranet- it is a private network outside the institute. It can be satellite or internet or video conferencing or digital television or mobile telephone.

Advantages

- Great transparency
- Great accessibility
